# CSCI 463 Assignment 4

- [Assignment 4 Handout](#) - RV32I Disassembler
- Sample [decoder constants](#) (code from handout)
- Sample [test files](#).

Note that the reference output files are named the same as the corresponding input (binary) files and include the memory size used as part of their names. For example, the file `master.out` was run using `master.bin` as the input file and the default memory size.

The file `tinyprog-m40.out` was run with a memory size command-line parameter of `-m40` and using the `tinyprog.bin` as the input file like this:

```
./rv32i -m40 testdata/tinyprog.bin > tinyprog-m40.out
```
